

# Qualifying Residential Geothermal Equipment for Federal Income Tax Credits:

**Due to the fact that there seems to be much confusion in our industry, as to which equipment qualifies for these federal credits, we strongly advise that you and your accountant or financial advisor, check the facts.**

Please check both of the following links:

**Energy Star:** [www.energystar.gov](http://www.energystar.gov) On the first screen, find and click “heating and cooling” on the left of the screen. On the next screen find and click “heat pumps geothermal” on the left of the screen. On the next screen under “find a product” on the right of the screen, click either Excel or PDF, whichever you prefer. (You may need to “zoom” in order to enlarge the view). Note: Our products are all listed as Enertech Manufacturing.

**AHRI (Air Conditioning, Heating, Refrigeration Institute):** [www.ahridirectory.org](http://www.ahridirectory.org) On the first screen, in the “Residential” box scroll down and click on “water-to-air and water-to-brine heat pumps”. On the next screen, use the “drop window”, at the upper right to locate either GeoComfort or Hydron Module. Click the appropriate brand. Then enter the “code” provided at the lower right and click “search”. Once you find the Model Number, click on the reference number, on the left. You will be able to view the “Certificate of Product Ratings”, for that product.

## Notes:

1. As of this publishing, you must purchase equipment with the domestic water heating option (desuperheater), in order to qualify.
2. You and / or your financial advisor are solely responsible for determining whether, and to what extent, you may benefit from any tax credits.
3. Energy Dynamics, Inc. does not warrant your tax benefits or the qualification of any equipment, beyond the information shown on the above web-sites.
